HUNTLEY:

Almost six months have passed since the day of the U-2 flight and the crisis it created. But a crisis should not be filed and forgotten in a nation's archives simply because it is in the past. Now that the passions and partisanship of an election year have subsided - and because we feel that the consequences of this crisis are still unfolding and the lessons to be learned are still significant - NBC News has decided to retell and re-examine the story of that fateful flight of May first and the events that flowed from it.

Interior Lockheed Kelly Johnson

Here is the man who designed it, Lockheed Vice President, Kelly Johnson.

JOHNSON:

Back in 1953 and 1954, we were studying ways and means of making fighter
airplanes like the F 104 go higher
and further than they did at that
time. As we went further and further
into these studies it soon became
apparent that it would take an entirely new kind of aircraft to do the job
that we wanted done.

CU Wingtip

Pogo

From this came the U-2.

We made a wing that had a very long span - over 80 feet. The wing had to carry the whole weight of the aircraft and still be very, very light. It had to be designed not only to hold a great amount of fuel, but it was designed so the wing tip acted as part of the landing gear.

On the take off, we invented what we called the pogo landing gears. These stick into sockets in the wing, and rest on the ground and keep the airplane level on take off.

If the design of the U-2 presented unusual problems, so too did flying it.

The pilot of a U-2 must spend an hourand-a-half before take-off relaxing and breathing pure oxygen in order to prepare himself for high altitude conditions.

His helmet is airtight and sealed to his body by a cork ring; he can, therefore, neither eat nor drink before... or during a flight. A long flight may keep the pilot sealed up for more than eight hours.

The circumstances surrounding the downing of the U-2 are still largely a mystery. American intelligence sources have communicated a version of what happened to several reporters ...among them, Robert Hotz, editor of the authoritative Aviation Week magazine.

HOTZ:

Our government knew that Powers was in trouble almost from the moment that it first occurred. This is because we have a rather extensive network of monitoring Soviet communications, and they also have a similar network with which they monitor ours.

HOTZ:

During Powers' flight across Russia our monitoring system was functioning and gained a great deal of useful

information. From conversation of the Russian radar crews it was evident that Powers' flight was expected and it was tracked almost from the moment he crossed the Afghan border. From conversations of fighter pilots and air defense installations it was evident that they set up relays of supersonic fighters in an attempt to shoot him down. As Powers neared Sverdlovsk, he reported a flameout in his jet engine and began to descend to the altitude at which it was possible to start this engine in the air, The last communication with Powers was about 40,000 feet. When Powers came down in the Soviet Union, our government knew the following facts....the fact that the plane had come down in the area of Sverdlovsk....the fact that it had been forced down by a mechanical failure, not shot down by a rocket at 70,000 feet as the Soviets later claimed. What our government did not know was whether the pilot was still alive

From an intelligence point of view, the original cover story seemed to be particularly inept. One gets the impression, and I believe it's a true one, that it had been in the files for a long time. And when the U-2 came down, it was just yanked out of the files and issued.

A cover story has certain requirements. It must be credible. It must be a story that can be maintained; and it should not have too much detail. Anything that's missing in a cover story can be taken care of by saying the matter is being investigated.

The most striking thing was the failure to consider, in the cover story issued, the possibility that the pilot might be alive and the airplane might be intact.

On the morning of May the fifth I was at the State Department. We were waiting with more than normal curiosity for Link White's daily briefing. He came out to see us at twelve forty-five and he read the following statement:

Stock White Statement May 5

WHITE:

The Department has been informed by N.A.S.A. that, as announced May three, an unarmed plane - a U-2 weather research plane based at Adana, Turkey, piloted by a civilian, has been missing since May one. During the flight of this plane, the pilot reported difficulty with his oxygen equipment. Mr. Khrushchev has announced that a U.S. plane has been shot down over the U.S.S.R. on that date. It may be that this was the missing plane. It is entirely possible that having a failure

in the oxygen equipment, which could result in the pilot losing consciousness, the plane continued on automatic pilot for a considerable distance and accidentally violated Soviet airspace.

The United States is taking this matter up with the Soviet Government, with particular reference to the fate of the pilot.

BOURGHOLTZER:

Thinking back to the answers Link White gave to the many questions we later posed...it is perfectly clear that he had not been informed of any decision to make the State Department the sole spokesman about the U-2. There was a lot of conferring and some more confusion...Other reporters arrived. Well, I finally left and I had the impression that there wouldn't be any statement. But at 1:30 p.m., Bonney did release a statement that attempted to answer the questions reporters had been asking him.

The Bonney statement went considerably beyond that of the State Department. For instance, there were details about the supposed U-2 flight plan, how many U-2s we had, where they were stationed, and so forth. The statement was so detailed that it raised almost as many questions as it answered. For example, Bonney contended that the U-2 had taken off from Incirlik Air Base in Turkey at 8 a.m. local time. This was considerably later than the time announced in Khrushchev's speech, and reporters were quick to notice the discrepancy.

He announced that the United States was prepared to resume nuclear testing as soon as possible — as he put it. The tests were to be for the purpose of improving means of detecting underground blasts — a step towards policing a nuclear test ban. What you have seen in the past hour is an a ttempt at a historical evaluation of a most controversial subject, including opposing viewpoints on the matter. Over thirty responsible reporters who covered this story as it unfolded contributed to this effort. There are certain conclusions that may reasonably be drawn from the facts examined in this report.

- 1. The cover story was inadequate to its mission. It was hastily released, excessive in detail and failed to take account of the possibility that Powers might be alive.
- 2. As the U-2 crisis developed, there was a serious lack of coordination among the governmental agencies involved, which resulted in conflicting and damaging statements to the world.

- 3. By avowing the intelligence flights, an act unprecedented in the history of nations, our government suffered the consequences of having been caught in public misstatements.
- 4. Nobody expects the United States, or any other nation to stop intelligence activities, but by justifying the U-2 flights and implying they would continue, we materially affected the Summit Conference. If Khrushchev intended to wreck the conference beforehand, we gave him a ready made excuse. If he intended to negotiate, we made it difficult for him to do so.
- 5. Throughout the whole U-2 affair, we suffered from the fact that there was apparently no one official or agency to direct our total response to this crisis.

This is not a matter for the history books, but vitally affects our ability to survive as a nation. There will be other crises that the new administration, and succeeding administrations, will have to face. In the world as it is today, we cannot afford another U-2
